- **Menurut penjelasan saya:** Laporan ini secara keseluruhan menampilkan hasil konfigurasi dan pengujian konektivitas jaringan menggunakan protokol RIP dan EIGRP, serta verifikasi koneksi antar perangkat dalam jaringan tersebut.
- **Analisa yang saya dapatkan dari Laporan tersebut:**
  - Keberhasilan Routing:** Kedua protokol routing (RIP dan EIGRP) berhasil membentuk tabel routing yang memungkinkan konektivitas antar perangkat dalam jaringan.
  - Keunggulan EIGRP dibanding RIP:** Walaupun RIP berhasil dalam jaringan ini, EIGRP memiliki keunggulan dalam hal efisiensi dan skalabilitas untuk jaringan yang lebih besar.
  - Penggunaan di Masa Depan:** Untuk jaringan yang dinamis dan kompleks, EIGRP atau protokol routing yang lebih canggih akan lebih efisien daripada RIP.
- **Kesimpulannya,** laporan ini menunjukkan bahwa EIGRP menawarkan performa yang lebih baik dalam skenario jaringan yang memerlukan efisiensi dan keandalan yang lebih tinggi.
